

Test Case ID	Test Case Title	Test Case Description	Pre-Conditions	Steps	Expected Results
TC_REBALANCE_1	Validate correct calculation for IBM (Buy scenario)	Validate IBM shares to buy when current% < target%	Total portfolio value = \$100,000 IBM target% = 20%, current% = 10%, price = \$150	1 Open the rebalancing application 2 Enter total asset value = 100000 3 Enter IBM target% = 20 4 Enter IBM current% = 10 5 Enter IBM price = 150 6 Click "Calculate"	Target value = \$20,000 Current value = \$10,000 Dollar difference = +\$10,000 Shares to buy = 10,000 / 150 = 66.67 shares
TC_REBALANCE_2	Validate correct calculation for ORCL (Sell scenario)	Validate ORCL shares to sell when current% > target%	Total portfolio value = \$100,000 ORCL target% = 20%, current% = 30%, price = \$220	Same as above, but with ORCL values	Target value = \$20,000 Current value = \$30,000 Dollar difference = -\$10,000 Shares to sell = 10,000 / 220 = 45.45 shares
TC_REBALANCE_3	Validate no action for MSFT, AAPL, HD	Validate HOLD when current% = target%			Shares to buy/sell = 0 Action = HOLD
TC_REBALANCE_4	Validate total buy = total sell (dollar value)	Validate rebalancing app maintains total portfolio value			Total BUY dollars = Total SELL dollars 10,000 (IBM buy) = 10,000 (ORCL sell)
TC_REBALANCE_5	Validate negative variance always results in BUY				Negative variance → BUY Positive variance → SELL Zero variance → HOLD
TC_REBALANCE_6	Validate error handling for invalid inputs		Test-Data:- contains non-numeric value	1 Open the rebalancing application 2 Enter total asset value = 100000 3 Enter IBM target% = 2@	Application shows validation error No calculation performed gives a message to enter numeric value.

Enter IBM current% =

4 10

5 Enter IBM price = 150

6 Click "Calculate"
